

Applications, automation & data

CORE CAPABILITIES

Websites & apps

Public websites, web and mobile applications, internal tools, and dashboards.

Workflow automation

API integrations, scheduled tasks, notifications, and reviewable exception handling.

Data workflows

CSV/XLSX imports, field mapping, validation, duplicate handling, and structured outputs.

SELECTED ENGINEERING WORK

Strata | iOS planning app

Pre-release. Product design and application development.

Scheduling, focus sessions, habits, and journaling using React Native, TypeScript, and Firebase. The codebase includes regression tests for daylight-saving changes, cross-midnight plans, and overlapping time blocks.

CallApp | Calling application & AI coaching

In development.

A calling workspace that combines live transcription and contextual AI guidance with human-controlled calling. Its backend connects telephony and AI services, checks suggestions against configured context, and handles stale responses and service fallbacks.

COMPANY OVERVIEW

Lacchi Software Co.

Software engineering and data services
New Haven, Connecticut

We scope software projects and subcontracting engagements for agency teams and prime contractors.

DELIVERY APPROACH

1. Define

We establish scope, milestones, dependencies, and acceptance criteria.

2. Build

We use version control and working demonstrations.

3. Verify

We agree on checks, validate behavior, and document results.

4. Hand over

We define source delivery, setup guidance, and support terms.

Security, accessibility, hosting, data handling, and permitted tools are scoped to each engagement.
